

WEST WATER CONNECTION PROJECT

The Hualapai Tribe, in cooperation with the Bureau of Indian Affairs (BIA) and the U.S. Department of Agriculture (USDA) is seeking public comment on a proposal to install a new, potable water transmission line along Buck and Doe Road between the Peach Springs Water System and the water tanks at West Water. Currently, a water truck is used to fill the existing potable water tanks, making six trips per day between West Water and a fire hydrant on Buck and Doe Road. The project is needed to supply Grand Canyon West with a reliable, potable water source.

The new, potable water transmission line would impact a 16-mile corridor along Buck and Doe Road, between the Peach Springs Water System and West Water tanks. The new line would be installed primarily within the existing right-of-way and would include a new pump station and a vault to control water flow. Approximately 100 gallons of potable water would be delivered to the West Water tanks every minute.

Construction is anticipated to start in 2024. An Environmental Assessment would be prepared for the project as part of the BIA and USDA National Environmental Policy Act (NEPA) requirements, and Hualapai Tribal Environmental Review Commission procedures.
